

Trusted, enterprise-ready agentic AI starts here.

When

October 25–28, 2026

Where

Las Vegas

Track

Oracle Integration

As organizations move from AI experimentation to real business execution, they need more than powerful models. They need secure connectivity to enterprise systems, governed workflows, visibility into agent actions, and the right human oversight. Oracle Integration brings these capabilities together to help enterprises connect, orchestrate, govern, and monitor AI agents across their business.

Whether you're exploring agentic AI, building AI-enabled integrations, or scaling automation across SaaS and enterprise systems, join us at Oracle AI World to see what's possible.

■ Oracle Integration sessions

LRN2138 Building trusted agentic AI with Oracle Integration

Session

Discover how Oracle Integration provides a trusted execution framework for agentic AI: agents securely access authorized business applications, participate in workflows, automate tasks, collaborate with employees, and operate with enterprise-wide visibility and administrative control. Includes the product vision, roadmap, and latest innovations in integration, process automation, RPA, observability, connectivity, and AI-assisted development.

LRN2140 Best practices for Oracle Integration AI-enabled projects

Session

Learn how Oracle Integration Projects provide a central framework for development and deployment, including team collaboration, code promotion, and using AI agents and MCP servers within projects — curating MCP tools and deploying specialized agents where they add value.

LRN2288 AI agent governance and human in the loop with Oracle Integration

Session

Autonomous agents can accelerate business processes, but important decisions still require the right oversight. Stan Tanev and Nathan Angstadt demonstrate Human in the Loop capabilities for approvals, reviews, and governed agentic workflows across Fusion Applications AI Agent Studio, AI Data Platform Agent Hub, AI Database 26ai Agent Factory, OCI Enterprise AI, and third-party or custom agents.

LRN2141 Connected AI agents with Fusion AI Agent Studio and Oracle Integration

Session

A technical look at building enterprise-ready AI agents that securely access business systems, execute actions, and operate under customer-defined governance controls. Hear from customers, partners, and product experts on how Oracle Integration extends Fusion AI Agent Studio and other agent platforms with connectivity, orchestration, MCP services, and governance.

HOL2143 Building agentic AI for SaaS connected to enterprise data with human oversight

Hands-on lab

Bring your laptop and build alongside us. Learn to design and orchestrate agents, connect them to enterprise applications and data, implement Human-in-the-Loop controls, and automate real-world business processes within enterprise governance controls.

■ Ways to engage

Attend an Oracle Integration session Five sessions on strategy, governance, and build	Try hands-on Oracle Integration Get in the product with guided labs
Visit the Demo Hub Meet the team and see the latest live	Join the Customer Roundtable Agentic AI and Integration — registration required
Join the Partner Roundtable Discuss your business with the team	Book a 1:1 meeting Ask your Oracle representative to arrange it
Join us for a welcome drink Meet the team in person	 Scan for more information Oracle Integration at Oracle AI World 2026 bit.ly/oracleai2026

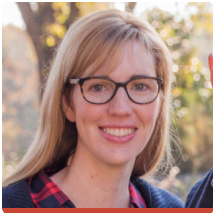

■ Meet the team

Connect with our regional experts, product specialists, and leadership team to discuss your use case, architecture, and challenges; share your feedback and help shape what comes next; and explore opportunities to showcase your customer success story.
